Melbourne, VIC 3000 | +61 420225537 | anishadsouza2000@gmail.com | [LinkedIn](#) | [Portfolio](#) | [GitHub](#)

SUMMARY

Technology graduate with hands-on experience building production-ready software across iOS, backend development, cloud infrastructure, and data engineering. Designed and shipped Embera, a women's health Apple Watch app built with SwiftUI, WatchConnectivity, HealthKit, and WeatherKit as part of the Apple Foundation Program at RMIT. Proven ability to design and deploy scalable REST APIs, ETL/ELT pipelines, and cloud-native systems using Python, Node.js, SQL, SparkSQL, and AWS. Strong foundation in agile delivery, design thinking, and translating complex technical outputs for non-technical stakeholders.

SKILLS

Languages: Python, SQL, Node.js, Express.js, PySpark, SparkSQL, React, SwiftUI, HTML/CSS

iOS & Mobile: SwiftUI, WatchKit, WatchConnectivity, HealthKit, WeatherKit, Xcode, SF Symbols, Apple HIG

Data: ETL/ELT Pipelines, Data Modelling, Data Quality & Governance, Databricks, Delta Lake

Cloud: AWS (EC2, S3, DynamoDB, Lambda, API Gateway), MinIO, Linux

Backend: RESTful APIs, MongoDB, PostgreSQL, MySQL

Visualisation & Tools: Power BI, Tableau, Git/GitHub, Jira, Agile/Scrum, CI/CD principles, Postman

AI Tools: ChatGPT, Claude, Google Gemini

EXPERIENCE

Store Services & Compliance Officer | [Woolworths](#) Mar 2024 - Present

- Responsible for workforce operations, payroll administration, cash management operations and compliance management within a high-volume retail environment.
- Administer end-to-end payroll processes utilising UKG Pro (Kronos), including employee scheduling, roster optimisation, and timecard management.
- Prepare and maintain compliance reports in accordance with statutory requirements and enterprise award obligations, achieving 100% accuracy.

iOS Developer | [Apple Foundation Program, RMIT University](#) Apr 2026

- Built and shipped Embera, a women's health iOS app delivering predictive hot flush risk insights, from concept through design and full-stack implementation.
- Led the end-to-end Apple Watch to iPhone communication implementation using WatchConnectivity, with a shared App Group data layer ensuring zero data loss under variable connectivity.
- Delivered discreet one-gesture symptom logging via watchOS 11 double-tap gesture with haptic feedback, checkmark animation, and automatic background sync.
- Integrated HealthKit and WeatherKit as live input signals into the app's daily risk forecast, combining biometric and environmental data.
- Built and deployed an on-device CoreML Tabular Classification model across 17 input features, delivering daily hot flush risk forecasts with up to 95% prediction confidence.

Backend Developer - RMIT Capstone | [Aviation Academy](#) Aug 2025 - Oct 2025

- Built and maintained 10+ RESTful APIs using Node.js and Express, integrating MongoDB with nested and relational data structures for a production-ready LMS serving 100+ users.
- Implemented a file-processing pipeline (PPT, PDF, MP4) enabling automated conversion and analytics, reducing manual content handling by ~60%, demonstrating end-to-end pipeline design and data quality thinking.
- Documented pipeline logic and data flows; communicated requirements and outcomes across a 5-member cross-functional team as Scrum Master.
- Facilitated sprint planning, stand-ups, and code reviews using Git-based workflows in an agile delivery environment.

Senior Data Engineer | [LTIMindtree](#) Aug 2022 - Sept 2023

- Designed and maintained enterprise-scale ETL/ELT pipelines processing millions of records from Salesforce and revenue systems, supporting regulatory compliance and financial risk reporting.
- Developed and optimised complex SQL and SparkSQL transformations in Databricks, improving query performance by 30 - 40% and reducing manual intervention by 25%.
- Built metadata-driven pipelines to improve data consistency, completeness, and lifecycle management across business-critical systems.
- Implemented and documented data quality checks and troubleshoot pipeline failures and data anomalies across production environments.

PROJECTS

Myki Ticketing System | Database Design & Implementation

- Designed a relational database schema for Melbourne's Myki transport fare system, incorporating ER diagrams, indexing strategies, and role-based access controls.
- Optimised query performance for transactions by ~35% and implemented data security measures including row-level security, encryption, and audit logging.

VibeMusic | Cloud-Based Full-Stack Web Application on AWS

- Designed and deployed an end-to-end application on AWS (EC2, S3, DynamoDB, API Gateway, Lambda), implementing secure authentication, data retrieval, and subscription management.
- Built RESTful APIs and structured data access patterns to support scalable query and subscription features on cloud infrastructure.

EDUCATION

Master of Information Technology | RMIT University, Melbourne

Graduated 2025 | GPA: 3.7 / 4.0

BE - Computer Science Engineering | St. Joseph Engineering College (VTU), India

Graduated 2022 | CGPA: 8.67 / 10

CERTIFICATIONS & ACHIEVEMENTS

- Deloitte Technology Consulting Virtual Experience (Forage) - Analytics & Business Transformation
- HackerRank Certified - Python (Basic), SQL
- Technova 2022 Winner - Innovative Project Award (AI-based Smart Door with Face Mask Detection)
