

ANISHA DSOUZA

Melbourne, VIC 3000 | +61 420225537 | anishadsouza2000@gmail.com | [LinkedIn](#) | [Portfolio](#) | [GitHub](#)

SUMMARY

Software Engineer with hands-on experience designing and deploying scalable, production-ready solutions across iOS, backend, cloud infrastructure, and data engineering. Skilled in building distributed applications and RESTful APIs with Node.js, TypeScript, Python, and SQL, with a strong focus on architecture, testing, and engineering best practices across the full software development lifecycle. Experienced in driving data-driven decision making, partnering with product and cross-functional teams, and applying a strategic, quality-first approach to deployment and continuous improvement. Comfortable providing technical leadership on distributed systems and translating complex technical solutions for non-technical stakeholders.

SKILLS

Languages: Python, SQL, Node.js, TypeScript, Express.js, PySpark, SparkSQL, React, HTML/CSS

iOS & Mobile: SwiftUI, WatchKit, WatchConnectivity, Xcode, SF Symbols, Apple HIG, UI design

Data: ETL/ELT Pipelines, Data Modelling, Data Quality & Governance, Databricks, Delta Lake

Cloud: AWS (EC2, S3, DynamoDB, Lambda, API Gateway), MinIO, Linux, cloud-native deployment

Backend: REST APIs, MongoDB, PostgreSQL, MySQL

IT Support & Systems: Microsoft 365, Active Directory, Microsoft Entra ID, Intune Device Management, L1/L2 support

Engineering Practices: Agile/Scrum, CI/CD principles, testing, code review

Visualisation & Tools: Power BI, Tableau, Git/GitHub, Jira, Postman

AI Tools: ChatGPT, Claude, Google Gemini

EXPERIENCE

IT Support Officer | Monash University, Australia

Oct 2026 – Present

- Provide chat, phone and floor support as an L1/L2 IT Support Officer, giving users multiple channels to get timely, hands-on technical help.
- Diagnose and resolve incidents and service requests across Microsoft 365 applications and services, escalating complex issues to the appropriate teams with clear handover notes.
- Support user account and access management in Active Directory and Microsoft Entra ID, following established security and identity procedures.
- Troubleshoot and support Intune-managed devices, helping keep endpoints configured, compliant and working as expected.
- Explain technical issues and fixes in plain language to non-technical users, documenting resolutions to build a reusable knowledge base.

iOS Developer | Apple Foundation Program, RMIT University, Australia

Apr 2026

- Architected and shipped Embera, a women's health iOS app delivering predictive hot flush risk insights, owning the solution end-to-end from concept through design and full-stack implementation.
- Led the end-to-end Apple Watch to iPhone communication architecture using WatchConnectivity, with a shared App Group data layer ensuring zero data loss under variable connectivity and supporting real-time sync.
- Delivered discreet one-gesture symptom logging via watchOS 11 double-tap gesture with haptic feedback, checkmark animation, and automatic real-time background sync, applying Apple HIG accessibility standards.
- Built and deployed an on-device CoreML Tabular Classification model across 13 input features, delivering daily hot flush risk forecasts with up to 95% prediction confidence.
- Delivered a full product pitch to an industry panel on Day 13, receiving feedback that the solution had real commercial potential; later presented Embera at /dev/world 2026, Australia's longest-running developer conference, as part of the AI/ML x Digital Health Mashup segment for the professional Apple developer community.

Backend Developer | Aviation Academy, Australia

Aug 2025 – Oct 2025

- Designed and maintained 10+ RESTful APIs using Node.js and Express, integrating MongoDB with nested and relational data structures for a production-ready, scalable LMS serving 100+ users, applying testing and best-practice code review standards.
- Implemented a file-processing pipeline (PPT, PDF, MP4) enabling automated conversion and analytics, reducing manual content handling by ~60% and demonstrating end-to-end pipeline architecture and data quality thinking.
- Documented pipeline logic and data flows; communicated requirements, decisions, and outcomes across a 5-member cross-functional team as Scrum Master, providing technical leadership and driving delivery strategy.
- Facilitated sprint planning, stand-ups, and code reviews using Git-based workflows, resolving issues quickly and championing continuous improvement in an agile delivery environment.

Senior Data Engineer | LTIMindtree

Aug 2022 – Sept 2023

- Designed and maintained enterprise-scale ETL/ELT pipelines processing millions of records from Salesforce and revenue systems, supporting regulatory compliance, financial risk reporting, and data-driven decision making.
- Developed and optimised complex SQL and SparkSQL transformations in Databricks, improving query performance by 30 - 40% and reducing manual intervention by 25% through scalable pipeline architecture.
- Built metadata-driven pipelines to improve data consistency, completeness, and lifecycle management across business-critical, distributed data systems.
- Implemented and documented data quality checks, and troubleshoot pipeline failures, production issues, and data anomalies across enterprise environments.

PROJECTS

Personal Portfolio Website | TypeScript, React

- Designed and built a personal portfolio site in TypeScript and React to present technical projects, architecture decisions, and case studies to prospective employers.

Myki Ticketing System | Database Design & Implementation

- Designed a relational database schema for Melbourne's Myki transport fare system, incorporating ER diagrams, indexing strategies, and role-based access controls.
- Optimised query performance for transactions by ~35% and implemented data security measures including row-level security, encryption, and audit logging.

VibeMusic | Cloud-Based Full-Stack Web Application on AWS

- Designed and deployed an end-to-end, cloud-native application on AWS (EC2, S3, DynamoDB, API Gateway, Lambda), implementing secure authentication, data retrieval, and subscription management.
- Built RESTful APIs and structured data access patterns to support scalable, distributed query and subscription features on cloud infrastructure.

OTHER EXPERIENCE

Store Services & Compliance Officer | Woolworths

Mar 2024 – Present

- Maintained payroll systems, compliance reporting, and cash management while completing my Masters, applying the same data accuracy, process discipline, and attention to detail that underpin reliable data and backend systems.
- Administer end-to-end payroll processes utilising UKG Pro (Kronos), including employee scheduling, roster optimisation, and timecard management.
- Prepare and maintain compliance reports in accordance with statutory requirements and enterprise award obligations, achieving 100% accuracy.

EDUCATION

Master of Information Technology | RMIT University, Melbourne

Graduated 2025

BE – Computer Science Engineering | St. Joseph Engineering College (VTU), India

Graduated 2022

CERTIFICATIONS & ACHIEVEMENTS

- Front of Store Operator of the Year, Group 1 Metro Stores, Victoria – Woolworths Group (2026), recognised for consistency and reliability while balancing the role alongside full-time study.
- Conference Speaker, /dev/world 2026 – presented Embera to the Apple developer community as part of the AI/ML x Digital Health Mashup student segment.
- Technova 2022 Winner – Innovative Project Award (AI-based Smart Door with Face Mask Detection)
